Importance: High

Hi Danelle

Finally, here is the draft.

I have revised the Epi section to “fit” our standard CARC documents since the members are familiar with this format and it will eliminate a lot of “shuffling” of papers and looking for tables.

After having gone thru the epi. studies it appears that only a hand full of studies are critical: Erickson, 1999; McDuffie, 2001; Hardell, 2002; De Roos, 2003; De Roos, 2005 (which all showed elevated but non-significance for NHL). Only Erickson and Hardel, 2008 reported a statistically significant elevation.

I am correct in this assessment?

So I am going to ask you a favor: Can you please focus on these studies for indepth discussion at the meeting. Especially the Erickson and Hardel 2008.

We can discuss this on Tuesday

Regards,

JR
